SOFTWARE E SERVIZI PER L'AMBIENTE

THE PUNCTUAL TARIF MANAGER

Wintarif is the most complete software for punctual waste tariffs, both as a tax (used by the municipalities with normalized or quantity methods) and as a corresponding service (used by the operators).

SINGLE DATABASE FOR ALL INFORMATION

The database is highly structured and relational, with constraints designed to ensure maximum security and efficiency in data processing.

MODULABLE SOFTWARE

Wintarif can be modulated for any calculation method adopted by the Municipality / Operator and in the case of punctual pricing and quantity, data can be recorded using different software and hardware combinations integrated and connected to the Wintarif database in real time, such as import of bins or bags readings.

The nominee is unique throughout the Data Base. This peculiarity makes it possible not to lose the history of the tax payer / customer in the event that the Municipality moves from an autonomous management to an external management system.

UNIQUE USER LAYOUT

- ✓ **Wintarif is able to use a single card for each nominee and connect all the accounting part to the reference Entity.**
By way of example, if the subject Rossi is managed by the Municipality with a tax levy and the following year with payment by a different Manager, his card will contain all the documents and the accounting situation related to both the management of the Municipality and the management of the new company, without duplicates and without losing the uniqueness of the holder, of its utilities and of the equipment delivered.

The innovative elements of the Wintarif platform are the centrality of the data and the accessibility to all the information contained in the single database to guarantee an effective management control to the organization.

The system is designed to always provide a response to the citizen-tax payer and to obtain the correction of his administrative position.

To achieve this goal, easy access to all information is achieved, not only by the Client's staff and the Municipality, but also by the citizen who can access his accounting position at any time via Web or via Smartphone (Android, iOS).

ALL IN ONE

Wintarif manages the calculation of the tariff by quantity, with any method of attribution of costs (prepaid, tariffing to number of emptying, by volume or by weight, etc.) and based on any method of detecting the production of waste (barcodes and RFID tags).

The Wintarif management system is organized to:

- develop simulations, set and calculate the tariff using different methods, prepare budget items
- manage the Tariff Plan and the accounting requirements, create accounting records, calculate the provincial tax, the additional indivisible services and other
- manage reminders, assessments, formal notice, injunctions and subsequent stages of enforced collection with reporting of the results of registered letters and court documents
- report several typologies of collections, importing data from the CBILL, Lottomatica, Inland Revenue, Post Office, collection agencies, in CBI and PagoPA formats (Softline is Agid certified partner)
- digitize the documentation
- manage cadastral data
- align the waste / registry database with automatic import / update procedures

Wintarif can be used in License version or as Software-as-a-Service(SAAS)

- process the quantity of waste produced in a detailed manner with transponders and bar codes

The platform Wintarif is mainly composed of following components for TARI / TARIP management activities:

- the Wintarif application with functionalities described above
- the Wintarif Web / App module for interfacing with web portals, apps for smartphones
- the Web Desk for citizens and municipalities
- the "Riciclario" application for smartphones for citizens
- the Android application "Geco" for the container management

Wintarif Web is the online Wintarif desk with a front / back office area to manage:

- reserved access and validation services to operators
- changes in personal data
- consultation services by Users
- requests for services
- online payments
- the distribution of bags for separate waste collection, both automatic and from the counter

Riciclario is an innovative application designed to help citizens and non-domestic users in the proper management of its waste - urban and assimilated - and to easily find information relating to your TARI position (waste tariff).

Geco is an integrated hardware / software system for the distribution and census of containers/bags on the territory.
